PROFILE

Product-minded full-stack engineer with 25+ years of experience building and shipping real systems end-to-end — frontend, backend, APIs, and databases. I turn ambiguous problems into working products with clean UX and reliable backend logic, and I own my work beyond release: monitoring, debugging, and improving in production. My recent focus is applied AI (LLMs, RAG, agentic workloads) integrated into real applications. Comfortable moving fast across the stack, working with ambiguity, and owning outcomes. English is my primary working language. Based in Austria (Dornbirn), with full labor-market access (Rot-Weiß-Rot-Karte plus).

TECHNICAL SKILLS

Full-Stack: React, Next.js, Angular, Node.js, TypeScript, JavaScript, PHP, REST APIs

Backend & Data: Java (SpringBoot, Quarkus, JavaEE), Python (FastAPI), SQL, PostgreSQL, MySQL, data models, authentication, integrations

AI / ML: LLMs, RAG systems, MCP, agentic workflows (Claude Code, LangChain/LangGraph), evaluation harnesses, prompt & context engineering, PyTorch

Delivery & Ops: Docker, CI/CD (GitHub Actions, GitLab), Prometheus, Grafana, observability, production debugging, Git, Jira

Quality: Testing (pytest, Playwright, Vitest), evaluation harnesses, code review, technical documentation

Strengths & Practices: Product sense, simplifying messy workflows, fast iteration, technical documentation, code review, technical mentoring, client workshops

PROFESSIONAL EXPERIENCE

Independent Consultant — Software & AI Development 2019 – Present

Tunisia → Dornbirn, Austria

- Talan (France–Tunisia Branch): supervised and contributed to an AI-powered data visualization platform automating the migration of analytics dashboards between heterogeneous BI platforms.
- Capgemini Tunisia: supervised and contributed to PharmaLink — a multi-actor web platform connecting patients, pharmacies, and administration, with automated prescription reading and pharmacy stock/reservation management.
- Deepened hands-on skills in Python, AI/ML (LLMs, RAG, PyTorch), and data pipelines.
- Used Jira for sprint and task tracking and GitLab for version control and CI/CD across consulting engagements, with occasional .NET-based components on select client work.
- Recently relocated to Dornbirn, Vorarlberg, Austria (July 2026); actively learning German for local integration. Full labor-market access (Rot-Weiß-Rot-Karte plus).

Software Engineering Consultant & Technical Mentor 2013 – 2019

TVTC (Technical and Vocational Corporation), Saudi Arabia

- Delivered technical and vocational consulting and application development in software development, and mentored junior developers within TVTC, Saudi Arabia's national technical and vocational training authority.

Senior Software Developer 2010 – 2013

SNCF, Tunisair, and other Tunisian companies

- Senior developer on a large-scale rail operations management system — wagon and train management, GPS tracking, and scheduling — built with Java/JavaEE.
- Spearheaded the development of Tunisair's online flight booking and reservation platform — one of the airline's first e-commerce systems, integrating real-time seat availability and payment processing.

Head of IT — 2004 – 2009

SOGEF / SOGEGAT Group Holding, Tunisia

- Directed the group's IT function — infrastructure, networks, servers, and business applications — leading a multidisciplinary team of engineers and technicians across all subsidiaries, with full responsibility for hardware/software upgrades, systems reliability, and cross-entity IT governance.

Junior Software Development Engineer — 1998 – 2003

OnlySoft, Tunisia

- Junior developer on early ERP systems for manufacturing clients (Delice, Meublatex, Safia, among others) — production, inventory, and business-process modules, laying the foundation on ERP data models, customizing, and production environments.

SELECTED PROJECTS

Full case studies, architecture notes, and live links: lassoued1.github.io

FabriQ — Agentic natural-language-to-SQL analytics assistant for industrial SMEs — security- and correctness-first: SQL guardrail on a read-only DB role (*AST validation, forced LIMIT, single-statement*), self-designed evaluation harness (100% across 95 cases, scored at execution, FR/DE/EN), LangGraph orchestration, 126 backend tests, Prometheus/Grafana observability, CI (*React, FastAPI, LangGraph, PostgreSQL, Docker*)

FabriCore — Transactional operations core for an industrial SME between Tunisia and France — correctness- and audit-first: immutable inventory ledger, idempotent commands, BOM-aware production, procurement/returns, shipments, simplified finance with labor costing and controlled EUR/TND/USD/CHF reporting, JWT/RBAC + Argon2id security, and ERP mock integration over HMAC-signed webhooks (*Java, Quarkus, PostgreSQL/Flyway, React FR/EN, Docker/Testcontainers, k6, Prometheus, OpenTelemetry, CI with backend/frontend/security gates*)

WerkPilot VLBG — Decision-support and operations platform for industrial SMEs — security- and traceability-first: asynchronous atomic CSV imports with correction/rollback lineage, backend-computed production/energy/quality KPIs, deterministic explainable anomaly detection, maintenance ticket workflows, PDF/CSV reporting, five-role RBAC and append-only audit trail, 129 backend tests, CI (*Java, Spring Boot, React, TypeScript, PostgreSQL, Testcontainers, Docker*)

TriageDesk — AI-assisted customer-support helpdesk — human-in-the-loop and cost-aware: every ticket classified, prioritised and pre-answered by an LLM (Claude), with a human approving every outgoing reply, strict structured outputs, confidence-based routing to manual review, RAG-grounded drafts (*PostgreSQL full-text search*), and per-call cost/token/latency auditing for real AI ROI; spec-first with requirement→test traceability and architecture-test invariants (*PHP 8.3, Laravel 12, Redis/Horizon, PostgreSQL, Docker, Larastan L8, Pest, GitHub Actions CI*)

PharmaLink — Multilingual patient-pharmacy platform for medicine availability and reservations — privacy- and availability-first: PostGIS geolocation search across pharmacy stock, end-to-end reservation workflows, asynchronous prescription OCR with human validation, granular role/permission access control with audit logging, and real-time notifications (*NestJS, Angular/React, PostgreSQL/PostGIS, Redis/BullMQ, MinIO/S3, Python/FastAPI, Docker, FR/EN/DE i18n*)

EDUCATION

- **Engineering Degree in Computer Science** — Tunisia, 1994
- **DEA (Diplôme d'Études Approfondies) in Computer Science** — 1997

CERTIFICATIONS

- NVIDIA — Fundamentals of Deep Learning
- Microsoft — Azure AI Fundamentals AI-900
- Microsoft — Azure Cloud
- AWS — Cloud Practitioner
- Oracle — Cloud Infrastructure Foundations Associate

LANGUAGES

English-Professional working proficiency • German-Beginner (actively learning) • French-Fluent • Arabic-Native
